

Description

The ER5000 Series (the latest generation of TESCO electronic controllers) is a microprocessor based PID (Proportional, Integral, Derivative) controller that brings precise algorithmic pressure control to a wide range of applications.

It can be used as a standalone unit to control the pressure of clean, dry inert gases from 0–100 psig / 0–6.9 bar, or be connected to any pneumatically actuated regulator or valve. Used with TESCO regulators, the ER5000 provides pressure control of gases and liquids from vacuum to 30,000 psig / 2068 bar, with a C_v of up to 12+. Whether piloting a mechanical regulator or used standalone, it provides for true closed loop control with exceptional accuracy and response time. The ER5050 is designed for Hazardous Location use.

Applications

- Test equipment
- Calibration stands
- Proof & burst testing
- Production equipment
- Metal or plastic forming/molding
- Hydraulic Power Units
- Chemical Injection Units

Features and Benefits

ER5000SI-1 – Standard ER5000

- Precise accuracy
- 16 Bit for Data Acquisition
- Compatible with TESCO's extensive dome loaded and air actuated pressure regulators available from vacuum to 30,000 psig / 2068 bar, with flow capacities from C_v 0.02 to C_v 12.0
- Control algorithms for Internal Feedback, External Feedback or Cascade Control modes
- Selectable **SETPOINT Signal** Source
 - USB
 - RS485
 - External analog (4–20mA or 1–5VDC)
 - Downloadable Profile (runs independent of PC or external analog source)
- Selectable **FEEDBACK Signal** Source
 - Internal Sensor (0–100 psig / 0–6.9 bar)
 - External Analog: 4–20mA or 1–5VDC
- Selectable Control Limits
 - Programmable limits for analog setpoint, feedback and error signals
 - Selectable control states: "Hold Last Pressure", "Vent", or "Full Open"
- TESCO ERTune™ software provided for data acquisition, PID tuning (real time graphic display of setpoint and feedback), creating and downloading profiles
- TESCO DLL provided for easy custom software development
- Software examples are provided for VB.NET, LabVIEW, C and C#
- USB cable included for quick computer connection (Not included with ER5050)

- NEMA 4X IP66 enclosure (water tight, corrosion resistant)
- 1/2" SAE x 1/8" NPTF fitting included (mates to most TESCO air actuated regulators)
- Automated solenoid valve leak test
- Trigger data acquisition based on system events

ER5000SV-1 – Standard ER5000

- All features of the ER5000SI-1 except with 0–10 VDC Setpoint and Feedback signals

ER5000FI-1 and ER5000FV-1 –Enhanced ER5000

- All features of the ER5000SI-1 and ER5000SV-1 are included plus two additional analog/digital inputs and two digital outputs that allow the user to:
 - Monitor an external signal in addition to feedback (e.g. flow, temp, force)
 - Alternate between two separate external feedback sources
 - Start/Stop or Resume/Pause pressure profiles
 - Wait for event to occur before proceeding to the next step in a downloaded profile (digital input)
 - Indicate that an event occurred in a downloaded profile (digital output)
- Analog output of the internal pressure sensor
- Conditional control with "IF/THEN" and "GoTo" profile commands
- Suspend control feature to lock output pressure for an extended period of time

ER5050 for Hazardous Locations

- Includes SI, SV, FI, FV options
- Approvals: CSA, IECEx, ATEX

ER5000 Typical Applications

The variety of applications is limitless. Any process variable that can be manipulated using the pneumatic output of the ER5000 can be controlled. Some possibilities include controlling pressure, flow, temperature, position, speed, force, consistency, torque, and acceleration. The ER5000 improves both speed and accuracy because it implements the control strategy directly at the control element (valve or regulator). Some possible applications include:

- Test stands
- Calibration
- Laser cutting systems
- Vacuum forming
- Super plastic metal forming
- Plastic extrusion
- Gas assisted plastic injection molding
- Lamination and composite material curing
- Tire molding
- Chromatography capillary inlet pressure
- Spray coating
- Water jet cutting
- Burst testing
- High pressure gas or liquid injection
- Replacement for valve positioners and I/Ps
- Spot welding pressure control

ER5000 Basics

ER5000 System Requirements

All ER5000 controllers require:

- Power: 24 VDC, 340 mA maximum, 180 mA nominal
- Pressure: ER5000: Up to 120 psig / 8.2 bar maximum clean, dry inert gas
ER5050: Up to 110 psig / 7.5 bar maximum clean, dry inert gas
- Setpoint signal: From PC, PLC, Analog
- Feedback signal: Internal or External

The ER5000 senses system pressure using either its internal sensor or a user supplied external transducer (4–20 mA, 1–5V or 0–10V) placed within the actual process line. You can operate the ER5000 in one of three control modes:

- Internal Feedback, which uses only the internal sensor;
- External Feedback, which uses only the external source;
- Cascade, which uses both internal and external sources in a “loop within a loop” configuration

ER5000 Communication

The ER5000 communicates using a USB or RS485 interface. The onboard USB port and included USB cable provide for quick and easy direct communication to a PC. The required USB driver is provided on the ER5000 User Support Software and Manual CD or online. An RS485 communications link can be established between the ER5000 and a PC using either a USB to RS485 or RS232 to RS485 converter. RS485 communication must be used for daisy-chaining two or more (up to 32) ER5000s on the same network. RS485 is recommended for ER5050 communication.

ERTune™ Software Features

TESCOM's ERTune™ program is an all encompassing software package which allows the user to address the ER5000 controller using a PC. ERTune™ allows users to tune the PID loop, monitor system operation, create and download profiles, specify control limits, enable password protection, acquire data and review previously recorded data. The basic screens are Tuning, Profile, Data, Configure and Diagnostic Tools.

ER5000 Software Development Support

The ER5000 protocol document is provided to assist in developing process control software that communicates with the ER5000 on any platform. Sample programs in VB.NET, LabVIEW, C and C# are available on the included CD along with the source code for the ER5000 DLL for Windows.

The TESCOM implementation of the protocol uses six functions to communicate: StartUp, ReadNetVar, WriteNetVar, ReadProfileSegment, WriteProfileSegment and Shutdown.

ER5000 Tuning

The ER5000 is factory set to default PID parameters that work well for many TESCOM regulators in laboratory conditions. During initial startup, the user has the option to download the PID parameters for a specific TESCOM regulator series. The user can also adjust the Proportional, Integral and Derivative (PID) variables to:

- Achieve the quickest response to a setpoint change without overshoot or oscillation
- Achieve the best performance for a non-changing setpoint
- Optimize performance in the specific application conditions

Regulator Selection for use with the ER5000*

SPECIFICATION REQUIRED	EXPLANATION
Pressure	Selected regulator must be capable of handling the system pressures. For best resolution, the control pressure range of the regulator should be nearest (yet above) the maximum application control pressure requirement.
Flow Rate	Regulator must be capable of handling the required flow rate of the application.
Media	Regulator materials of construction must be compatible with the process media used for the application.
